SUMMARY

Final-year B.Tech (AI & Data Science) engineer who builds and ships production-grade AI systems end to end — from LLM, RAG and generative pipelines to the containerised, cloud-native infrastructure that runs them. Shipped CareerOS, a full-stack AI platform live in production on Kubernetes and AWS. Strong across Python, FastAPI, LangChain/LangGraph, Docker, Kubernetes, Terraform and CI/CD. Seeking AI/ML or DevOps engineering roles.

TECHNICAL SKILLS

Languages: Python, SQL, Bash / Shell Scripting

AI / ML & GenAI: TensorFlow, PyTorch, scikit-learn, GANs, CVAEs, CNNs, RNNs, LLM Fine-Tuning, RAG, Prompt & Context Engineering, Generative AI, Agentic AI

LLM / Agent Frameworks: LangChain, LangGraph, LangSmith, CrewAI

Quantum ML: Qiskit, PennyLane (variational quantum circuits)

Cloud: AWS (Cloud Architecting, CI/CD), Google Cloud Platform, Microsoft Azure (DP-900)

DevOps & Infrastructure: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD, Git / GitHub, Linux, Apache Kafka, Redis, VPS, Cloud Hosting, cPanel, CORS, Deployment

Backend & Data: FastAPI, PostgreSQL, NumPy, Pandas, Matplotlib, Jupyter, Google Colab

PROJECTS

CareerOS — Full-Stack AI Career Platform careeros.duckdns.org ↗

Live

- Built an end-to-end AI platform that orchestrates the job search — role matching, tailored application generation, and pipeline tracking — with a React front end over a FastAPI service layer.
- Orchestrated multi-step LLM workflows with LangChain; used PostgreSQL for durable state and Redis for caching and queues.
- Containerised with Docker and deployed on Kubernetes, provisioned via Terraform on AWS with CI/CD through GitHub Actions.

Tech: React, FastAPI, LangChain, PostgreSQL, Redis, Docker, Kubernetes, Terraform, AWS, GitHub Actions

Hybrid Quantum-Classical GAN — Synthetic 12-Lead ECG Generation

- Designed a hybrid quantum-classical GAN (QGAN) using variational quantum circuits to synthesise realistic 12-lead ECG waveforms from biomedical time-series data, with GPU-accelerated generator-discriminator training.
- Achieved realistic waveform generation with stable adversarial convergence.

Tech: PennyLane, PyTorch, FastAPI, NumPy, Python

Privacy-Preserving Synthetic Data for Financial Fraud Detection

- Built a synthetic-data pipeline using Conditional VAEs to generate privacy-preserving transaction datasets for fraud-detection models, improving detection accuracy ~18% in low-data settings while maintaining privacy compliance (trained on A100 GPUs).

Tech: TensorFlow, CVAEs, scikit-learn, Pandas, Python

EXPERIENCE

AI Research Intern — Tech Vaseegrah

May 2024 – Jul 2024

Remote

- Developed an AI-based e-commerce recommendation system in Python and scikit-learn, improving recommendation accuracy ~10% using collaborative filtering.
- Owned data preprocessing, feature preparation, and model evaluation across the pipeline.

EDUCATION

B.Tech, Artificial Intelligence & Data Science

2022 – 2026

Karunya Institute of Technology and Sciences, Coimbatore

CERTIFICATIONS & SIMULATIONS

AWS: Academy Graduate – Cloud Architecting (2025); CI/CD Pipeline Fundamentals (2025)

Microsoft / NVIDIA: Azure Data Fundamentals DP-900 (2024); NVIDIA AI for All – Basics to GenAI (2025)

Cisco / NPTEL: Data Analytics Essentials; NPTEL Cloud Computing (2024)

Forage Job Simulations: Deloitte – Data Analytics; TCS – Data Analytics; GenAI-Powered Data Analytics (2025)

Leadership: President & Co-SPOC, Karunya-IIT Madras Incubation Cell Build Club (2024–25); Google Student Ambassador, Karunya Institute.
